LOOKING BACK OVER THE PAST 13 YEARS OF THE CATALINA ISLAND CONSERVANCY

HON. ALAN S. LOWENTHAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 7, 2016

Mr. LOWENTHAL. Mr. Speaker, as Dr. Ann M. Muscat retired on June 25, 2016 as president and CEO of the Catalina Island Conservancy, it is important to step back and look over her successful tenure. She has served as president and CEO for more than 13 years—the second longest tenure of any previous Conservancy president.

"Ann and the Conservancy have achieved a lot," said Los Angeles County Supervisor Don Knabe. "I've had the great pleasure of working with Ann and her team, all of them consummate professionals who are dedicated to getting things done."

"Under Ann's leadership, the Conservancy has become a living laboratory of innovation in conservation, education and financial sustainability for nonprofit organizations," said Catalina Island Conservancy Board of Directors Chair Stephen Chazen, PhD. "The Conservancy has significantly improved the Island's ecological health, greatly increased access to Catalina's wildlands and expanded and enhanced its educational programs to better serve students living in Avalon and visitors from the mainland."

Here is a look back at how the Conservancy and its stewardship of Catalina Island have flourished since Muscat joined the organization in 2003:

During Ann's 13-year tenure, and through its Catalina Habitat Improvement and Restoration Program (CHIRP), the Conservancy staff has completed vegetation mapping of the entire Island, including non-native and invasive plant species. It has controlled and eradicated numerous invasive plant species that were eliminating native and rare biodiversity. It also expanded the native plant nursery's scope to include landscaping initiatives on the Island, along with restoration, and significantly expanded the native seed collection.

The Conservancy has been a leader in removing non-native and highly destructive animal species from the Island, leading to the re-discovery of native plants previously believed to be extinct. It also brought the Catalina Island fox back from the brink of extinction and supported the successful recovery of the bald eagle.

Its wildlife biologists have implemented innovative social (repatriation) and scientific methodologies (contraception) for managing the bison herd. They also have conducted bird and small mammal surveys, discovering nesting sea birds on cliffs and nearby rocks, and implementing protective measures for bat populations.

In addition, the Conservancy has pursued research partnerships with universities and museums from across the country, including a multi-institution collaboration that resulted in a
